

BREAKING NEWS

Portalis® brings Virtual Control Rooms to InfoComm13

InfoComm 13, in Orlando, FL, fueled the exhilarating launch of the revolutionary pro-xi® *Workstation Integrator*. Dealers and customers were ecstatic, and other vendors were amazed, at the Virtual Control Room capability created by the engineering team at Portalis.

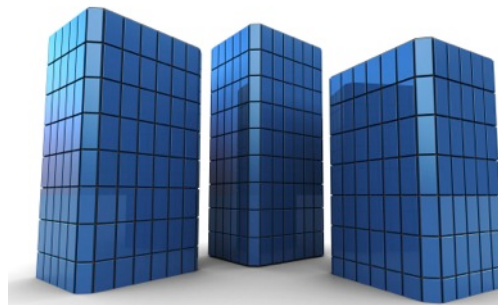

Chief Executives and Technology VPs are anxious to Virtualize their Control Rooms by integrating the unique pro-xi appliance with their existing KVM infrastructures. They instantly recognize the value of being able to simultaneously manage and monitor up to 64 disparate, computer systems on a single, integrated display; and they can access this unprecedented control from any workstation, in any office, in any room, in any building in the connected enterprise.

Carl Gardner, Director of Sales, and Josh Bastian, Sales Support Manager, prepare the pro-xi Workstation Integrator.
