# SEIZE CONTROL

With a Workstation Integrator from Portalis

- Enhance Operator Decision-Making
- Leverage Existing Computers and Software
- Maximize Staff Performance

## Monitor and control up to eight different systems from a single Integrated Workstation from Portalis

Highlight critical information using flexible sub-windows

Size and position windows for maximum operating efficiency

Control new and legacy systems from one position

Continually view the status of all systems with real-time thumbnail windows

Save and recall window layouts to facilitate specific operating tasks

Set triggers to alert data change

Patent Nos: 7,353,458; 7,498,846  
Additional Patents Pending

## Workstation Integrator

### Leverage Your Resources

Finally, you can improve operator decision-making, leverage existing systems/infrastructure, and reduce capital outlays in one incisive move.

### Just Plug It In

Installation is drop dead simple. Your existing systems need NO further modifications, NO additional software, and NO new drivers.

### Accentuate Critical Information

Organize and display information the way you need for the task at hand. Instantly recall different information layouts that focus on critical data without losing view of the bigger picture. Discover how you can share information and control using multiple Workstation Integrators.
